- 03 Roadmap

LINE network

What is Verda?

- Verda is the private cloud platform for LINE.
- This platform hosts many of LINE's services.
- We host 2 Verda Clusters.
 - Verda Prod : For production service
 - Verda Dev : For service development

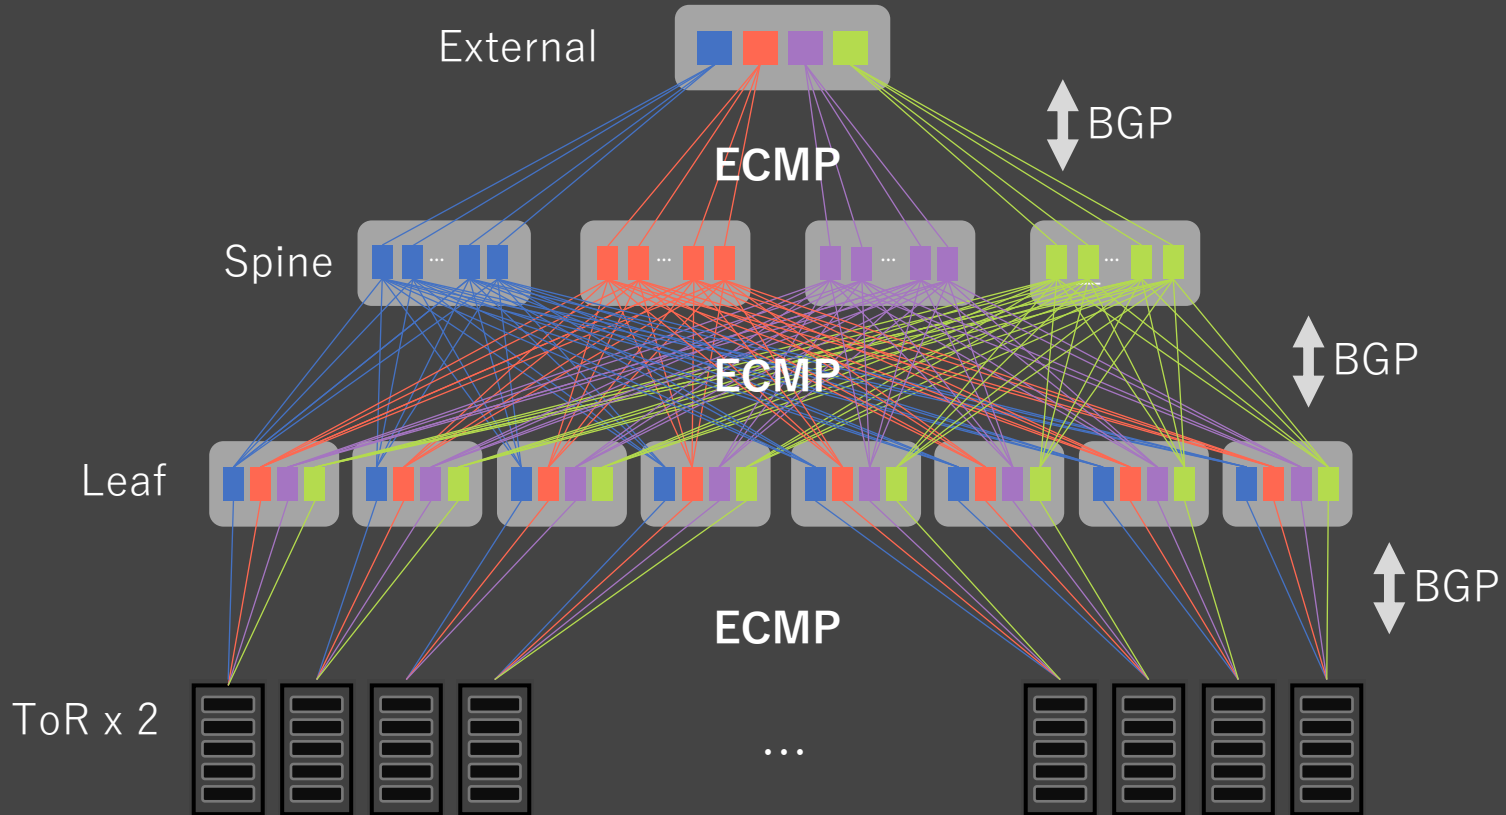

100,000+
Virtual
Machine

46,000+
Baremetal

7,600+
Hypervisor

IP CLOS Data Center Network

- Verda is working on IP CLOS Data Center Network
- CLOS Topology
- BGP only simple network. No need for complex protocol like EVPN, VXLAN
- Orchestrated by internally developed CLOS Controller

What Led us to SONiC

What is SONiC?

SONiC is a Linux-based containerized network operating system supporting more than 100 switch platforms and ASICs.

SONiC 202205 and 202211 Releases Features Highlight

118 new features in 2022

Security Build & Test Diagnostic Config More

Kudos to Nvidia, Broadcom, Microsoft, LinkedIn, Google, Dell, Intel, Tencent, Alibaba, Cisco, Edgecore, Target, xFlow Research, Celestica, Aviz Networks, Marvell, Juniper etc for their contribution

 **OCP** GLOBAL SUMMIT | OCTOBER 18-20, 2022 | SAN JOSE, CA

EMPOWERING OPEN.

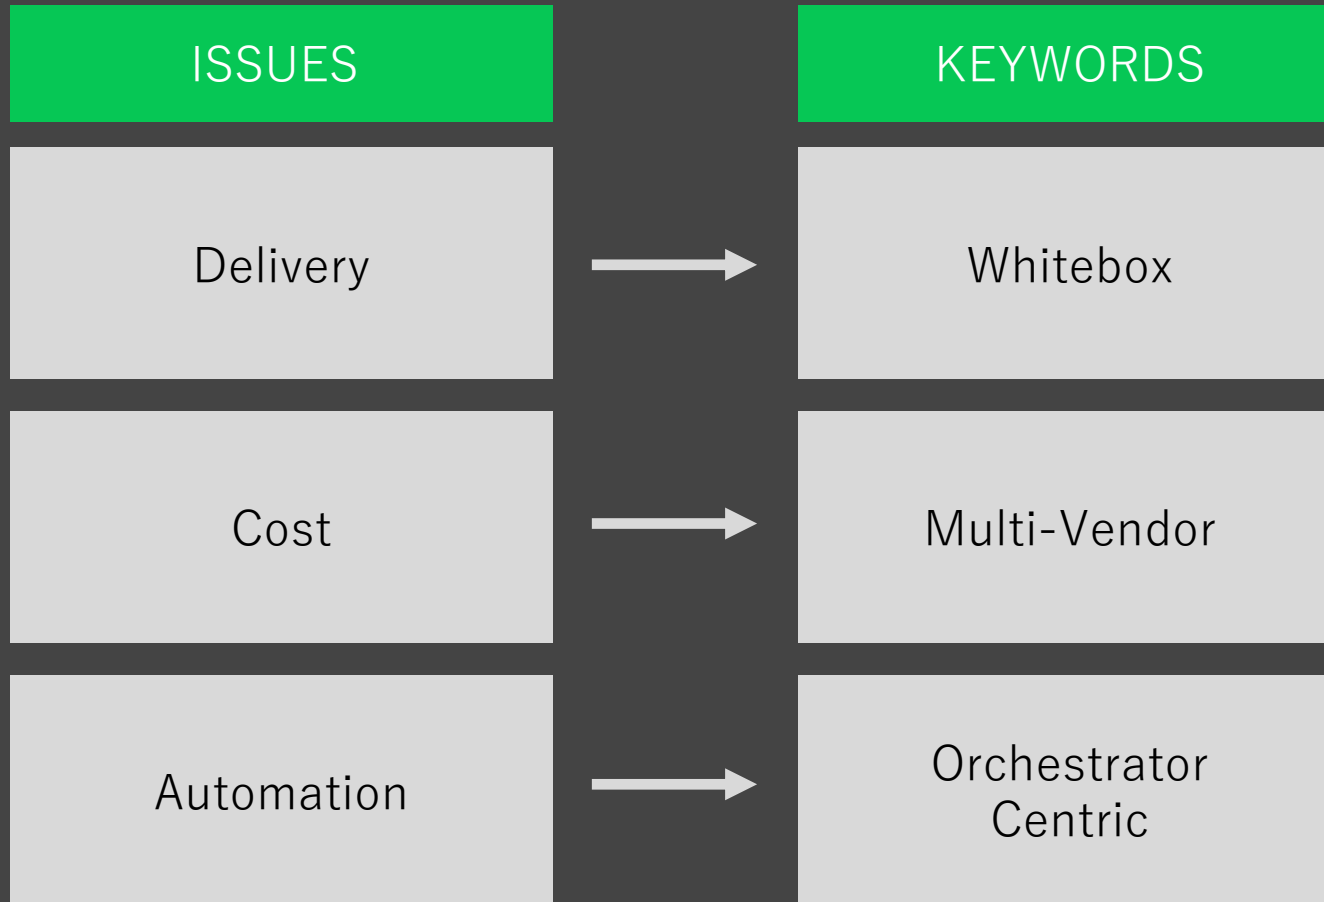

What Led us to SONiC

Evaluation Result Summary

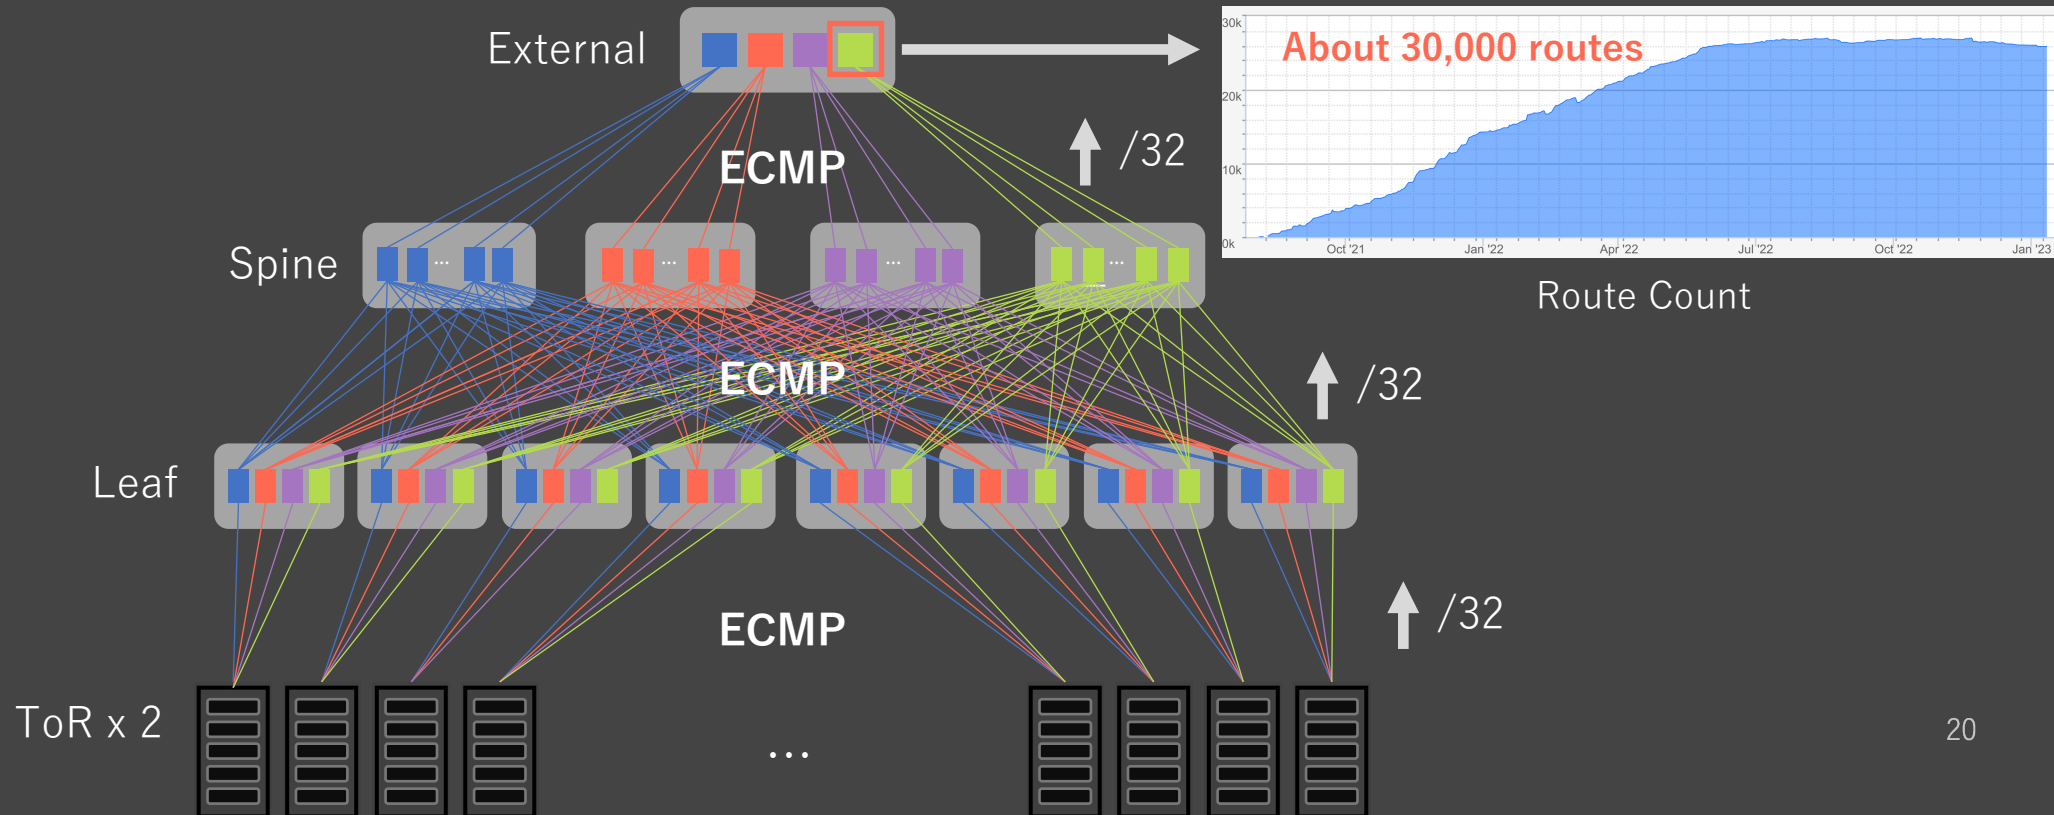

- Edgecore HW
 - 7326-56X, 7816-64X

TEST TYPE	OK	NG
Function	19	0
Performance	4	0
Traffic Loss Measurement	40	0
Long Term Endurance	2	0
Monitoring	14	3(Low Priority)
Operation	8	0

What Led us to SONiC

FIB writing performance

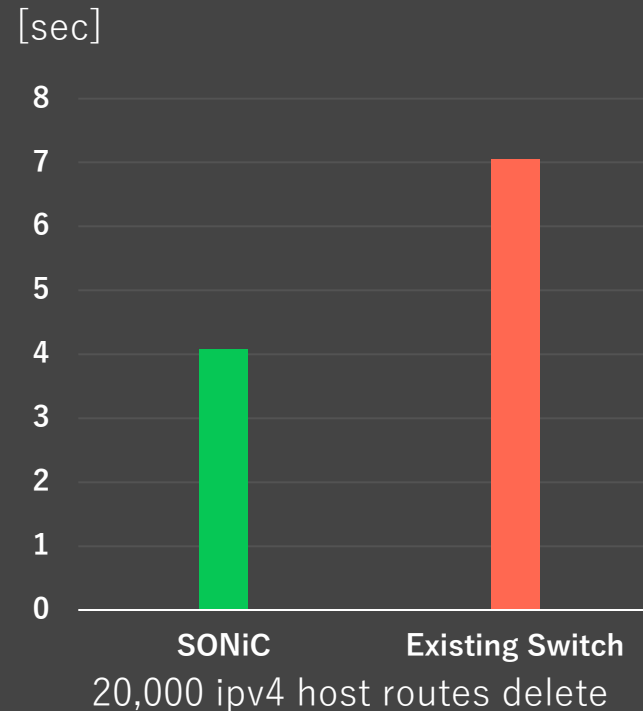

- Issues
 - CLOS network switches have a lot of /32 host routes, especially on upper layer switch.
 - Insufficient FIB writing performance cause packet loss.

What Led us to SONiC

FIB writing performance

- Solution
 - Test FIB writing performance.
 - No big difference between Enterprise SONiC and Existing Switch.

Operational Challenges

My First Impression on SONiC Adaption

- *Just recently, you deployed a large number of the new devices without a notice...*
- *Another new switch? No, thank you...*
- *That model frequently rebooting and malfunctioning.*
- *We are on fire because of the heaps of interface failure.*
- *SONiC MUST NOT be that problematic. Are you sure about that?*
- *Oh, feeling headache... Too many things to learn, operating cost, loads on first alert handlers...*

Tool fixes...

What is SONiC ?

Another new switch again...

Monitoring

Operational Challenges

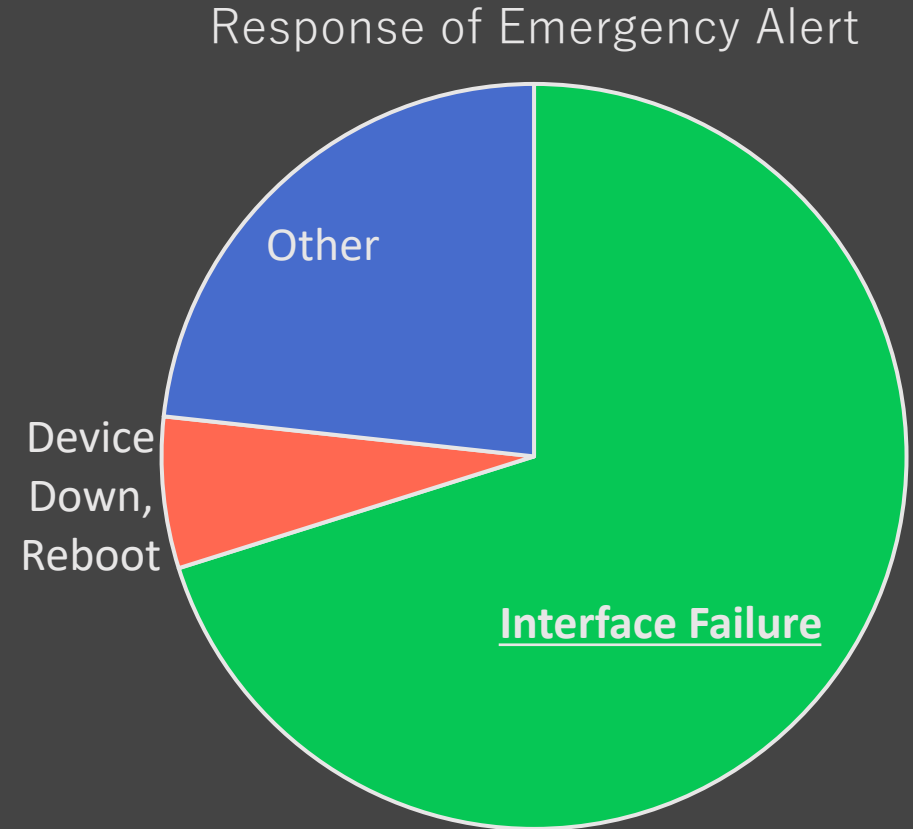

How to Proceed

- Weekly Meetings
 - Development, Construction, Operation participated
 - Check Status of Evaluation, Construction, etc.
 - Sharing of Operational Issues
 - Seeking Solutions

Operational Challenges

Concerns about Interface Flapping and Silent Rebooting

- Issues
 - If another new switch has the followings...
 - Frequent Interface Flapping
 - Frequent rebooting and malfunctioning
 - It's going to be a NIGHTMARE for operation.....

Operational Challenges

Interface Flapping and Silent Rebooting

- Calculation based on the number of exchanged transceivers (xcvrs)
- For the specific switch in a server room

Failure rate in a month

	Case 1	Case 2
Exchanged xcvr	30/month	13/month
Total xcvrs	44 switches x 32 links = 1408 xcvrs	276 switches x 4 links = 1104 xcvrs
Failure Rate	$30 / 1408 = \underline{2.1\%}$	$13 / 1104 = 1.1\%$

- For SONiC/Edgecore, 16 switches x2 links = 32 xcvrs
 - No alert for 4 months is our expectation.
 - Need more monitoring in Verda-dev environment.

Operational Challenges

Operational Complexity

- Issues
 - Need to have operators learn the operating commands of the new OS.
 - Operations manual needs to be revised.

Operational Challenges

Operational Complexity

- Solution
 - CLOS controller
 - Setup, Detour, etc...

New CLOS-Controller

Search

NAME	class	OS	Version	switch_groups

NOS-A	NOS-B	NOS-C
Detour Check Commands		
net show time	show clock	sonic-cli -c 'show clock no-more'

ハードウェア概要 [CLI基本操作](#) CLI便利コマンド SONiC documents パラメータ説明 SONiC検証/検討wiki

CLI基本操作

普段、使用する基本的なコマンドを記載する。

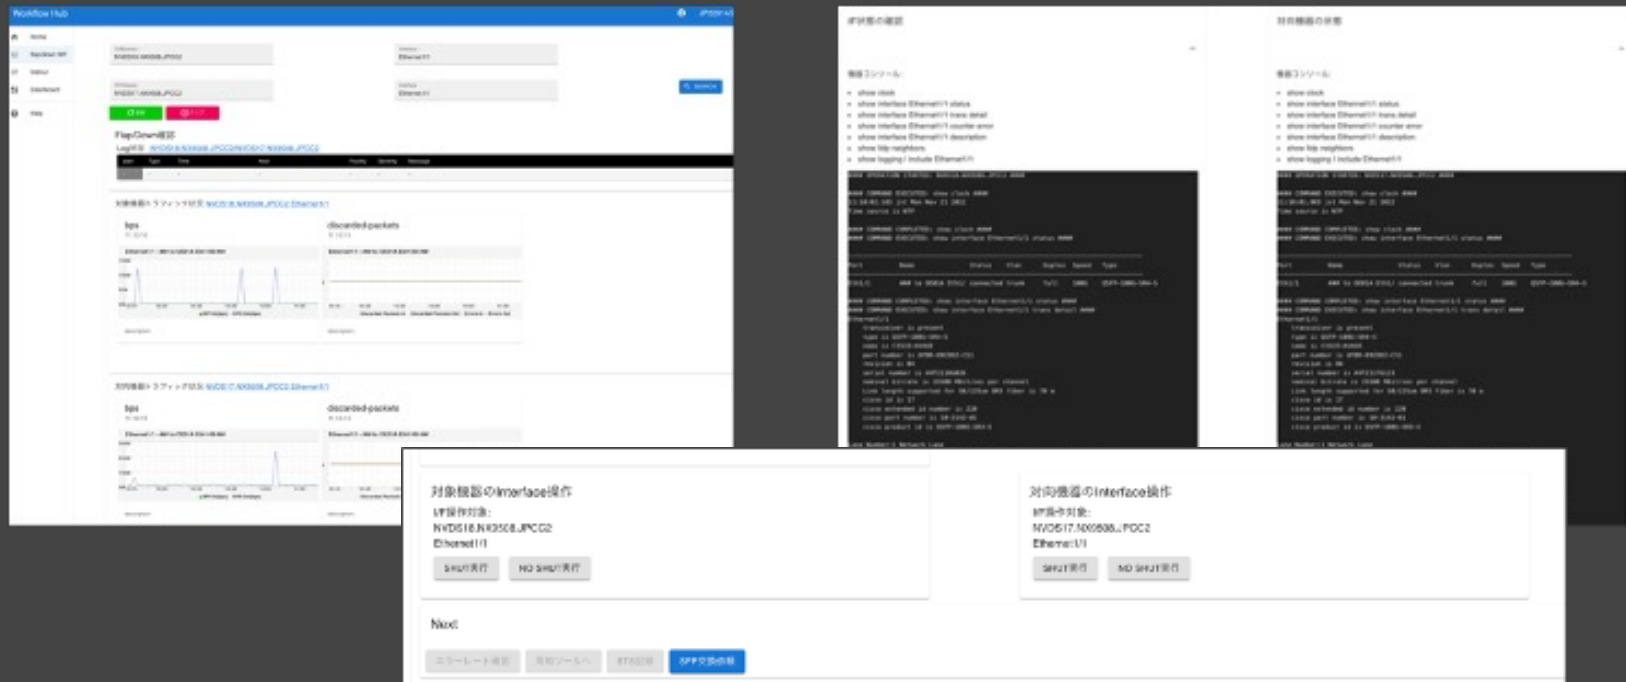

- 基本的なCLIの操作感はCisco Nexusと似ている部分がある
- showコマンドはどのモードでも実行できる

No.	内容	コマンド
1	機器へログイン	sshまたはconsoleに対応している。 <pre>[irteam@LNNWDEVTS1522 ~]\$ ssh eas7326.blue.nwdev's password: Linux BLUE.NWDEV 4.9.0-11-2-amd64 #1 You are on</pre>

Operational Challenges

Operational Complexity

- Automation with CLOS Controller to minimize the operational loads (Same UI for NOSes and automatic check)
- However, operators are required to learn all NOSes to some extent for handling issues.

Operational Challenges

Interface Name Policy

- Issues
 - Interface numbering starts from 0.
 - Interfaces to servers are from Eth0 to Eth47.
 - Generally, it starts from 1. The difference will cause a human error.
 - Interface numbers on the front panel start from 1...

Numbers On SONiC

Printed Numbers

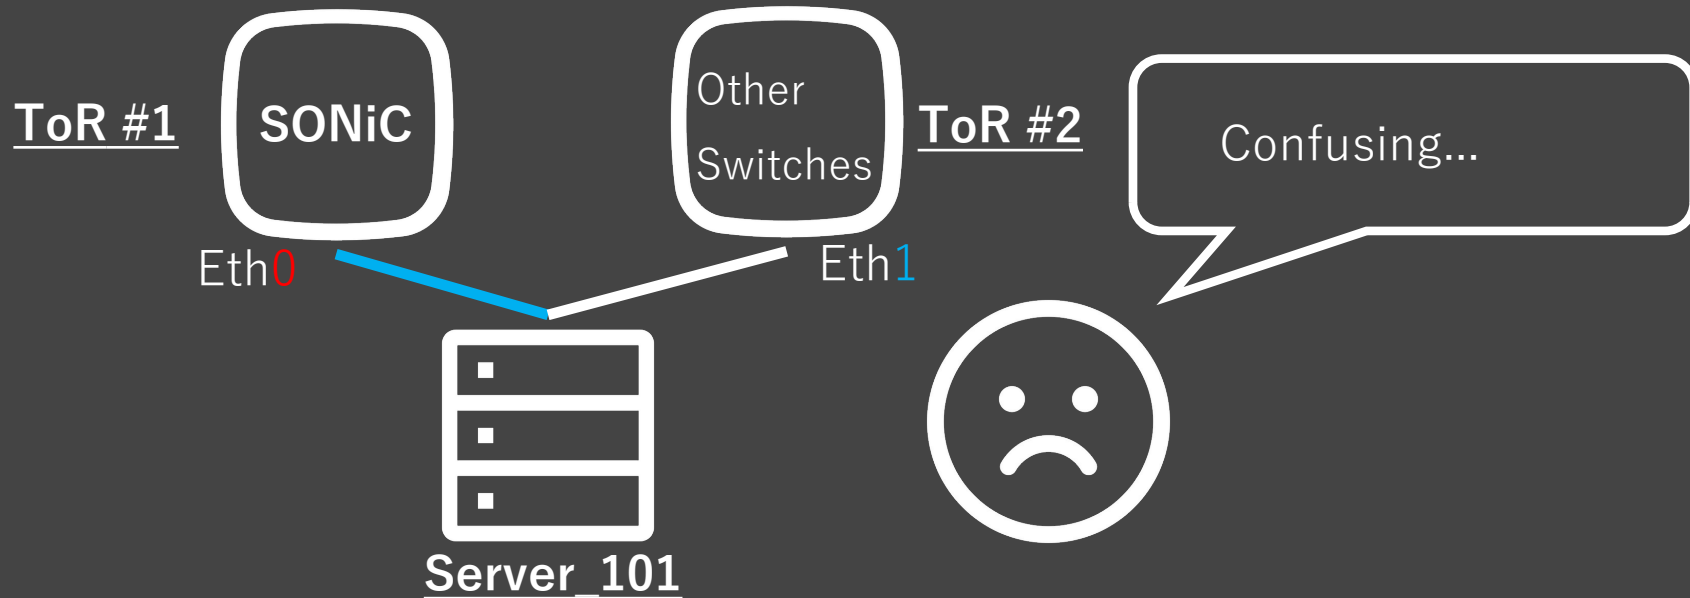

Operational Challenges

Remote Operator

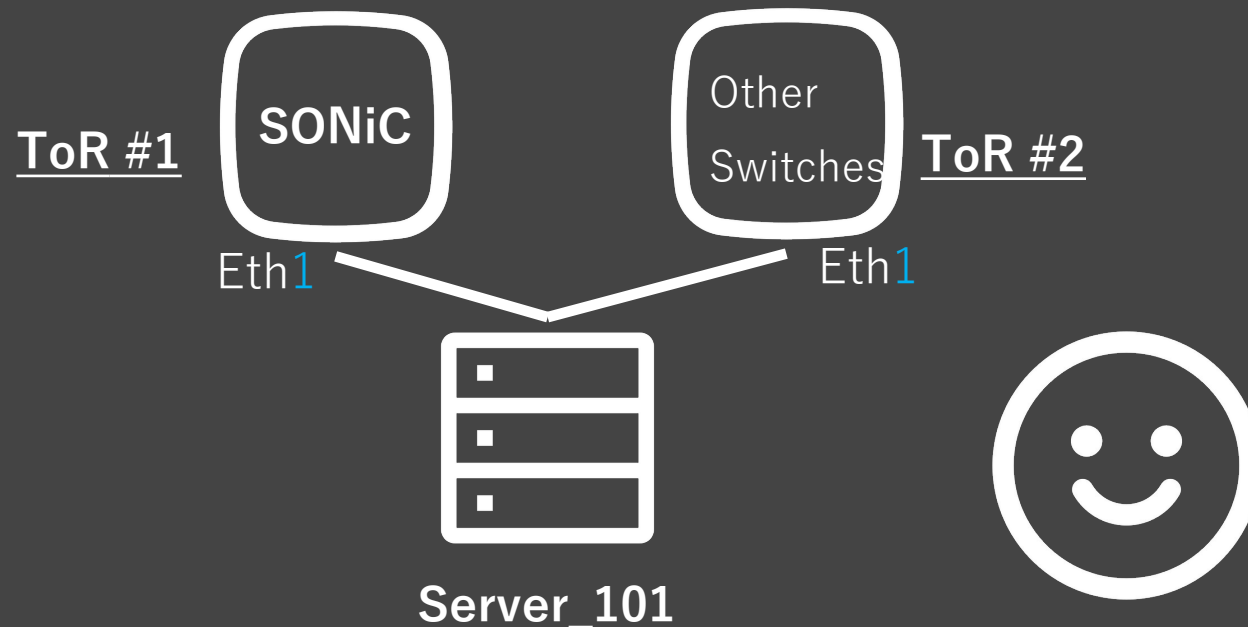

Local Operator

Operational Challenges

- Solution
 - Fix in Enterprise SONiC
 - The scope includes REST, GNMI, Config_db.json, frr.conf, syslog, SNMP etc.
 - The new numbering policy is optional.

Operational Challenges

Rack arrangement

- Change Rack arrangement for smooth DAC removal.

52	
51	ToR-A
50	ToR-B
49	
48	Server
...	Server

52	
51	ToR-A
50	
49	ToR-B
48	Server
...	Server

Operational Challenges

Monitoring by SNMP

- Issues
 - SNMP process crash periodically.
 - Some SNMP MIB which LINE use was not available.

Operational Challenges

Monitoring by SNMP

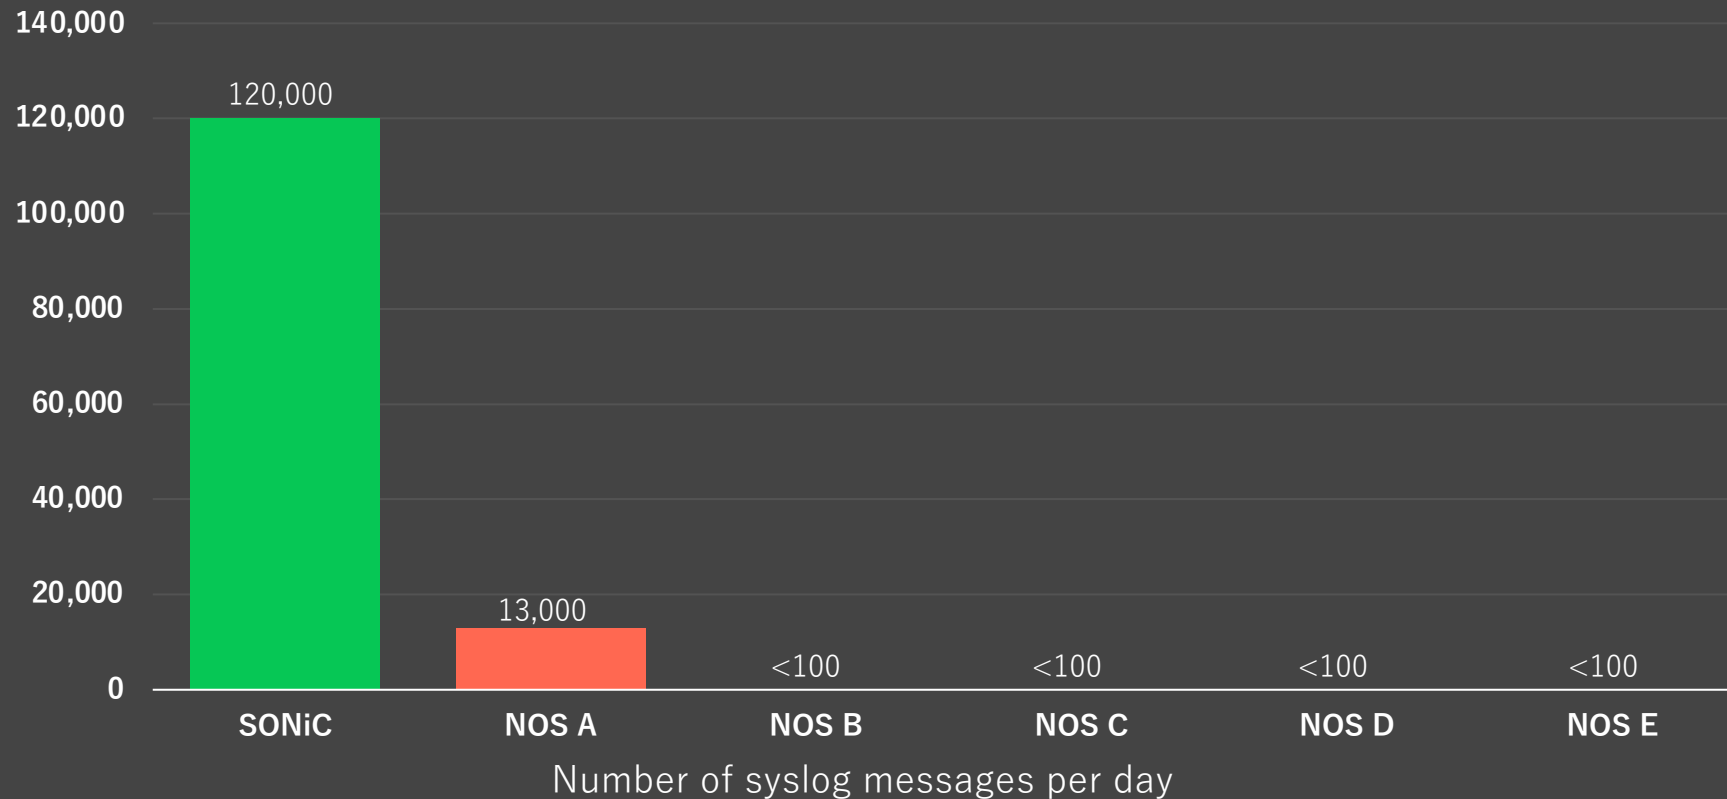

- Solution
 - Shared the issue detail on meeting with Enterprise SONiC development members.
 - Both issues was fixed within only 1 month.

SNMP MIB	status
Memory usage	OK
CPU usage	OK
Interface counter	OK
temperature	OK
LLDP info	OK
Power status	NG -> OK
FAN status	NG -> OK

Operational Challenges

Logging

- By default, Enterprise SONiC send a large number of syslog messages. This cause High load of s
yslog server.
- Classify syslog messages manually and stop sending unnecessary syslog .

Operational Challenges

Summary

- There were various operational problems, but we managed to clear them.
 - So far, SONiC nodes are running stably.
- It was good that we were able to check and discuss from an operational perspective from the early stages of the new NOS support project.

Roadmap

What We're Working On

Project Schedule

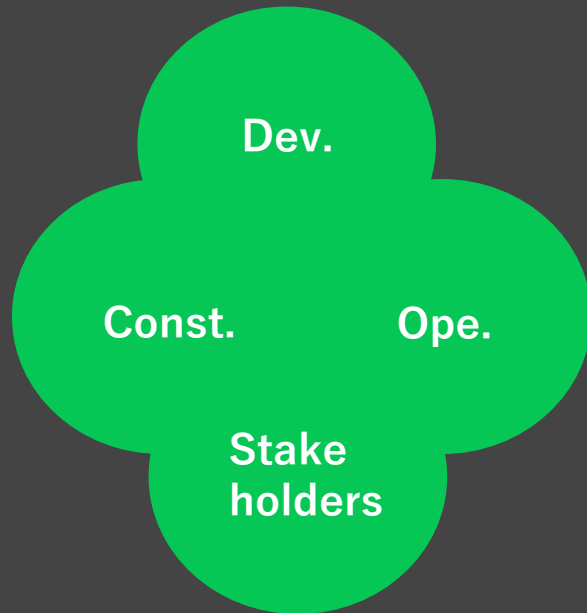

Roadmap

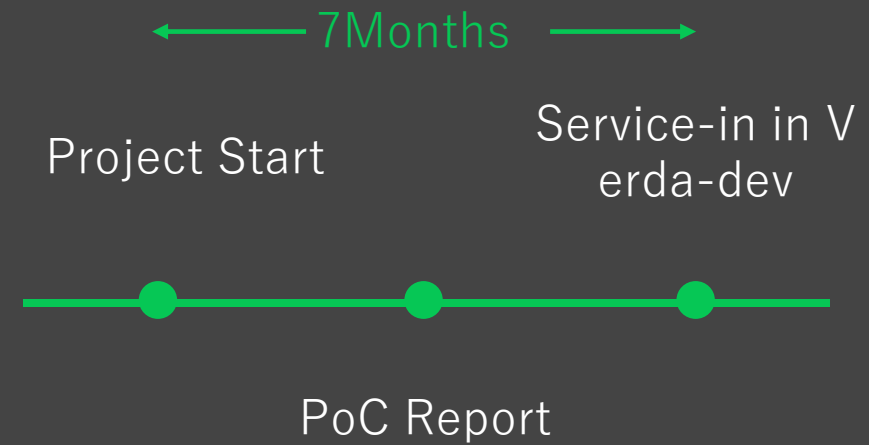

- Hardware Agnostic Network Management
- Clos Network Verification
- SRv6 Termination on ToR
 - Private Network Extension to Physical Servers
 - High Performance Private Network Gateway

Summary

- Collaborative Decision-making

- Fast Service-in

Questions from Speakers

1. How do you evaluate a new NOS?

Ex. When operation team join the project?

2. Expectations on SONiC

Ex. Where do you plan to use SONiC? Management? Campus?

Any questions are welcome!

THANK YOU
